

A phylogenetic tree diagram illustrating the evolutionary relationships between several bacterial groups. The tree is rooted at the top left with a pink node. A thick grey branch leads from the root to a green node labeled [Ruminococcus]_gauvreauii_group. From this green node, a thin grey branch leads to a yellow node. Another thin grey branch leads from the root to a blue node labeled Christensenellaceae_R-7_group. This blue node branches into two more blue nodes: Ruminococcus and Lachnospiraceae_NK4A136_group. The Ruminococcus node further branches into two light blue nodes.
