

Persistent edges

Parabacteroides
Bacteroides

A network diagram illustrating persistent edges between two bacterial taxa. The taxa are represented by pink circles: Parabacteroides (medium) and Bacteroides (medium). The edge is a thick grey line connecting the two taxa. The background is filled with many small, semi-transparent light blue circles.

```

```

Collinsella
Senegalimassilia

A network diagram illustrating persistent edges between two bacterial taxa. The taxa are represented by yellow circles: Collinsella (medium) and Senegalimassilia (small). The edge is a thin grey line connecting the two taxa. The background is filled with many small, semi-transparent light blue circles.
